
Tribal Sovereignty in the Pinoleville Pomo Nation: Sustainable Housing and Renewable Energy Technologies

Ryan Shelby

Alfred P. Sloan Ph.D. Student Scholar

Cofounder, Community Assessment of Renewable Energy and
Sustainability

I181 Technology and Poverty
University of California, Berkeley

February 18, 2010

Agenda

- About Me
- Sustainability Technology
- New Product Development Processes
- Methodological Approaches
- The Pinoleville Pomo Nation
- Pinoleville Pomo Nation and Berkeley Partnership
- Innovation Workshop
- Pomo Inspired Housing Prototype
- Outcomes of the Partnership
- Final Thoughts: Lessons Learned
- Q/A?

About Me

- Home: Letohatchee, AL
- Status: 4th yr. Ph.D. student in Mechanical Engineering
- Research Focus: Sustainability, Product Design, Expert Systems, Bayesian Models
- Graduation: May 2011

Sustainability Technology

- Some technology solutions:
- Great concern about environmental impacts

Sustainability Technology: Adoption Rates

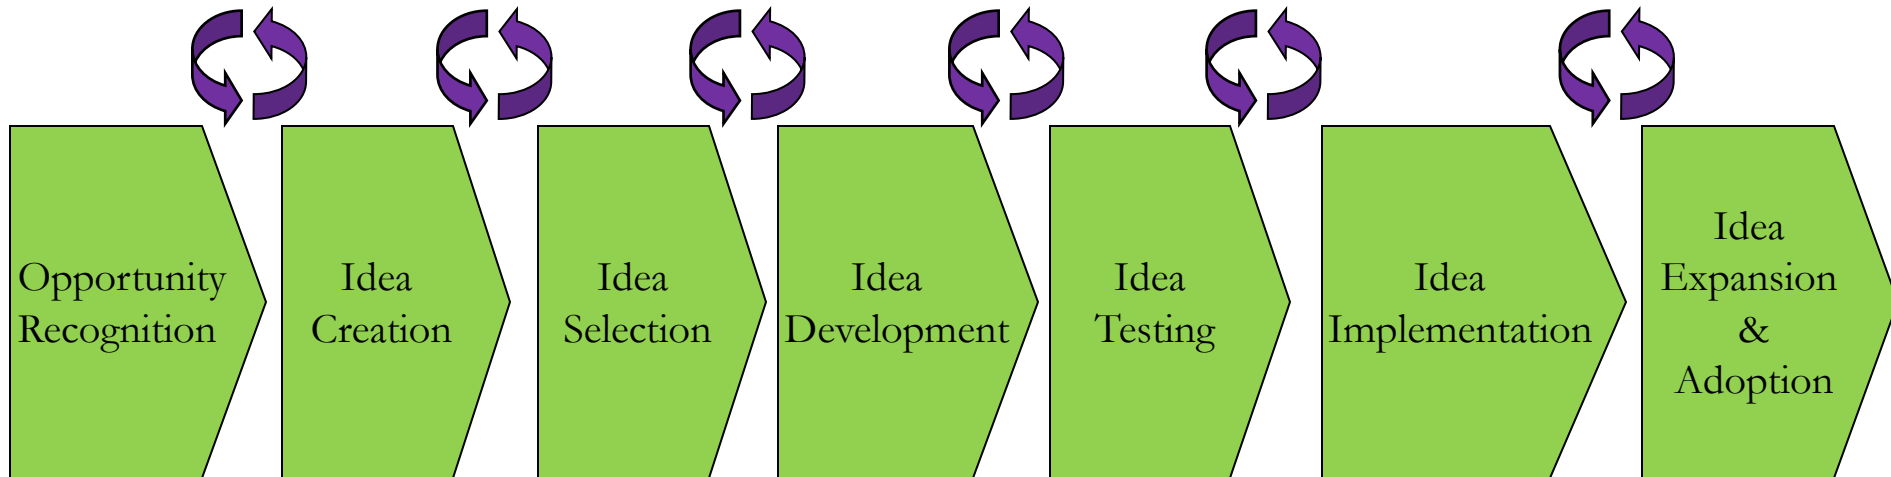

- Slow adoption by populous

- Common

- ~60-70% of US households have less than 8 CFLs
- 25% decline from 2007 peak sales level of CFLs

New Product Development (NPD) Process

Central Tenets: Technology Driven Design Methodology

- Technology Centered Design focus:

- I. Performance
- II. Reliability
- III. Manufacturability
- IV. Price Points
- V. Time to Market

Central Tenets: Human Centered Design Methodology

- Human Centered Design focus:
 - I. Better account for the end user needs
 - II. Inform design with end user needs
 - III. Maintain performance and reliability

Central Tenets: Co-Design Methodology

- Co-Design focus:

I. End user is expert on needs

II. End users and designers both control idea creation

III. Idea creation is done in the usage environment

Pinoleville Pomo Nation Case Study

- The Pinoleville Pomo Nation is a Native American tribe located in Mendocino County

The Pinoleville Pomo Nation: Ukiah Parcel

- The PPN's land reserve consists of ~106 acres on two parcels

Initial Meeting: Concerns of the Pinoleville Pomo Nation

- Rising heating and cooling costs
- Drought conditions
- HUD-financed housing provides basic necessities
- No representation of the cultural and traditional values

Pinoleville Pomo Nation and UC Berkeley Partnership

- Engineering 10 is a freshmen engineering design class
- Project goal: Assess the needs and design sustainable housing that could be integrated into the tribal community

Codesign: Innovation Workshop 2008

- Workshop held to understand needs and brainstorm concepts with PPN.
- Good and Bad Technology Round Robin Session
- Split Group User Needs Assessment Session
 - Elders
 - Adults
 - Youth
- Brainstorming on Conceptual Designs Session

Innovation Workshop 2008: Framing Sustainability

Innovation Workshop 2008: Top Needs and Metrics

- Energy Conservation
- Learn and Use Traditional Techniques (Cultural Values)
- Privacy
- Exercise
- Storage
- Safety
- Comfort
- Lower Energy Costs
- Space

Innovation Workshop 2008: Co-designed Concepts

Conceptual Home Design 1 with Solar and Wind Power Generation

Innovation Workshop 2008: Co-designed Concepts

Conceptual Home Design 2 Wind Power Generation and Grey Water

Innovation Workshop 2008: Co-designed Concepts

Conceptual Home Design 3 with Grey Water, Wind, and Solar Power Generation

E10: Pomo-inspired Housing Prototype

Outcomes of Innovation Workshop 2008: PPN Quotations

One female resident, Deborah Smith stated :

- *Personally, I really enjoyed working with all of the UCB and CARES students over the one-year project. To see this project go from an original model all the way through to the completed prototype was amazing. The students worked very hard to create this project. They asked a lot of questions and seemed to take genuine interest in our needs, such as: our energy bills and gray water usage, and to keep this project as green as possible.*
- *We had several meetings with the UCB and CARES students and from these meetings they were able to accurately assess and meet our “green” ideas and traditional needs. Because, of this project, I have become very interested in sustainable environments and architecture. I look forward to working with CARES members Ryan and Tobias on future energy feasibility studies and other projects.*

Innovation Workshop 2008: Students' Quotations

One male, Asian-American student wrote in his design journal:

- *Today was essentially the kick-off for our human-centered sustainable design project. To be honest, I'm rather excited about it. I was assigned to my first choice project - solar electricity generation for the Pinoleville Pomo Indian tribe. I've been interested in alternate forms of energy for a long time, and am eager to learn more about, not to mention have the chance to work on my first genuine engineering project.*
- *Today, we had our innovation workshop at the PPN reservation in Ukiah. Man-where to begin! Overall, I'd have to say the experience was a positive one. I mean yes, it was a bit of a hassle getting there and it was certainly a very long day, but I feel that the knowledge gained about the PPN people and their needs . . . It was a productive/ informative day, and I look forward to beginning the design process with my team mates.*

Final Housing Design: Innovation Workshop 2009

Final Housing Design: Innovation Workshop 2009

Final Housing Design I: Summer 2009

Draft Plan 'A' for PPN Sustainable Home

Plan not to scale

North is ↑

Renewable Energy Feasibility Study: Overview

- Focus areas:

- micro-hydroelectric,
- moderate-temperate geothermal electrical,
- geothermal heat pumps,
- biomass,
- biogas,
- wind,
- solar electric,
- solar thermal

- Deliverables:

- Deployment and development plan that has the renewable energy options and designs that meets the PPN's cultural, environmental, and economic requirements

Renewable Energy Feasibility Study: Work Done So Far

- Historical Avg. Electricity Consumption of PPN Homes

Renewable Energy Feasibility Study: Work Done So Far

- Estimated Avg. Electricity Consumption of PPN Homes after Efficiency

20 – 30% electricity savings projected

Renewable Energy Feasibility Study: Work Done So Far

- Determined the solar insolation potential of the Sozzoni property for 2010

Figure __ Solar Radiation
(Watt-hours/m²)
January – April 2010

— Property boundary

March 53 - 170 W/ m²

June 174 - 246 W/ m²

December 14 - 68 W/ m²

Renewable Energy Feasibility Study: Methodology

I. Conduct Series of Innovation Workshops

- Understand previous work done
- Identify fundamental needs and preferences of Pinoleville Pomo Nation
- Prioritize focus areas and determine product specifications
- Establish synergy with other Native American Nations

II. Assessing energy potential of resources

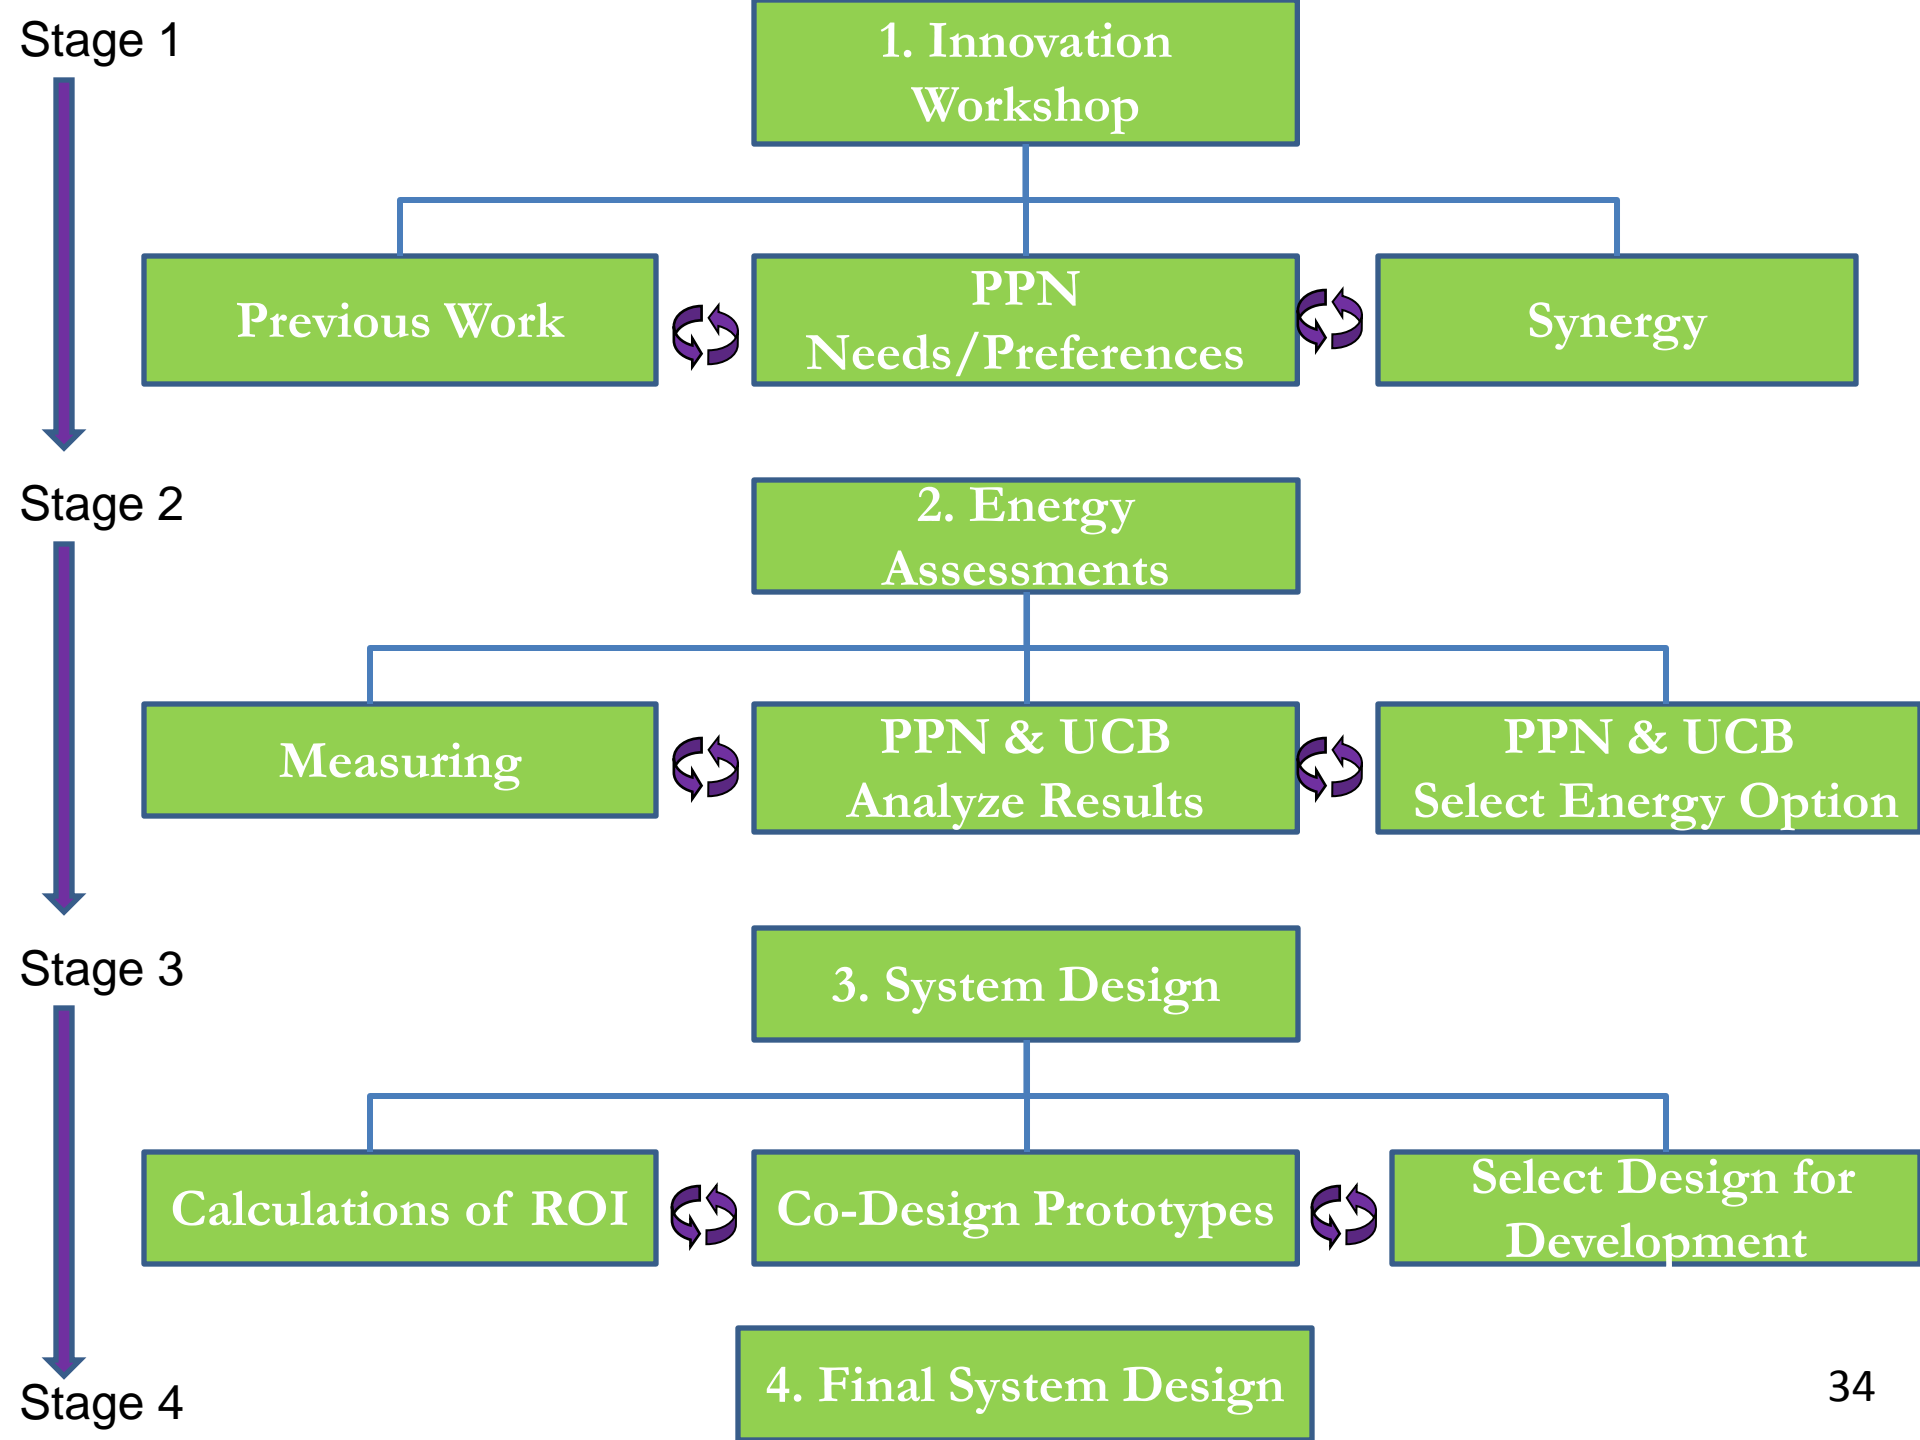

- Solar insolation
- Volume flow rates
- Wind speeds at varying heights (30 m, 50 m, 70 m, 100 m)
- Yamobida (Pomo for wind hole creek)
- Biomass potential from local forest companies
- Biogas potential from local waste

Renewable Energy Feasibility Study: Methodology, contd.

III. Co-design energy systems for deployment

- Reconvene with PPN to analyze data and design system
- Culturally appropriate
- Multi-source, resilient
- Power Generation Capacity
- Economic ROI
- Job Creation Potential
- Maintenance and Operation by PPN
- GHG emissions production and ROI
- Reliability of Supply
- Market for Sale (i.e. sell back to grid)

Outcomes of Partnership

- Empowered the PPN to make informed decisions about various renewable energy options
- E10 students were able to develop professional and communication skills
- Federal funding secured to build culturally inspired sustainable homes and buildings; Construction began in Summer 2009
- DOE funding secured to perform renewable energy feasibility studies: solar, micro-hydro, biomass, etc.

Final Thoughts: Lessons Learned

- There is no one standard for sustainability; merely frameworks
- Sustainability is personal; must be defined by the end user
- Key is to harness the local knowledge within end user group
- Co-design changes the power dynamics to utilize expertise of all
- Co-designing  Solutions  Willingness to Adopt
